

Nausea Assistance for Everyone

Blah is a simple nausea assistance device for everyone. Designed by Thumbs Up Inventions, LLC, it provides comfort, control, and cleanliness during nausea episodes. Blah comes in two sizes — the adult version **Blah** and the child-sized **Blah buddy**.

Key Benefits

- **Comfort and Control:** Soft ergonomic support helps users rest their head, face and arms for comfort during episodes of nausea and vomiting.
- **Cleaner Care:** Minimizes mess and strain for users and caregivers in homes, clinics, and on the go.
- **Simple Design:** Easy to clean, durable materials made for repeated use.
- **Two Sizes, Same Purpose:** Blah for adults, Blah buddy for kids. One concept, different fits.

How It Works

Blah's contoured design is available in different materials for various settings: the tabletop and over-the-toilet versions are molded plastic for durability and easy disinfection in hospitals or clinics, while the lap version is either molded plastic or soft vinyl with a beanbag-type interior for home use. Compatible with bowls or hospital emesis bags, it helps users manage nausea with dignity.

Use Cases

- **Adults:** Chemo and infusion days, migraines, motion sickness, illness, or post-op recovery.
- **Kids:** Flu, ear infections, car rides, illness, or post-op care.
- **Care Settings:** Home, school, clinics, urgent care, and travel.

Inventor

Lori first imagined Blah as a child wishing for comfort during sickness. Years later, as a mother of four and now a grandmother, she turned that early idea into a practical solution for everyone facing nausea. Her mission is simple — transform discomfort into relief.
